

FEATURES

- Belt conveyors are the ideal method of conveying when it comes to long distances and high capacities.
- Very cost efficient especially for long distance conveying operations.
- Can convey materials with irregular geometry and sizing.
- Long operating life.
- No product degradation.
- Easy assembly and disassembly.
- Low maintenance with installed belt cleaning brushes.

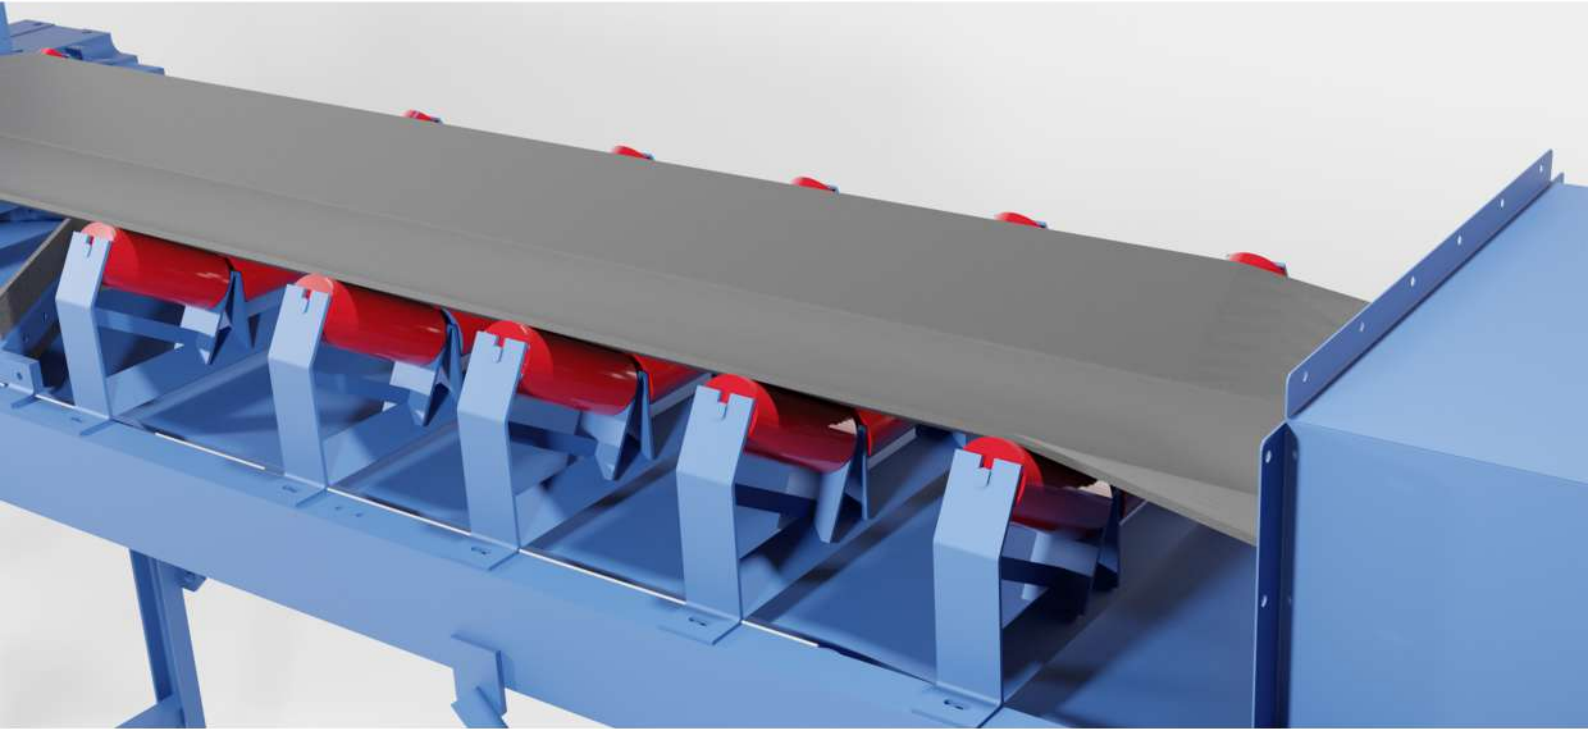

- Easy replacement of wear parts.
- Low labor and energy requirement.
- Low maintenance cost when handling abrasive materials.
- Continuous operation.
- Inclined options available.
- Design options available for (continuous) weighing and dosing needs.
- Different types and numbers of idlers for different process needs.

•Can be utilized in a wide range of industries:

Mining,
Mineral processing,
Thermal power plants,
Port throughput,
Ship loading, unloading etc.

- Various belt types available for wide variety of materials.
- Enclosed design options available for outdoor use.
- Dust free operation.
- Waterproof.
- Inspection and maintenance covers.
- Stainless steel constructed body option available.
- Multiple inlets and/or inlet hoppers available.
- Equipped with switches sensors etc. for PLC integration and safety.
- Modular design.
- Custom design for customer needs.

USAGE AREA

Loading,
Dosing,
Discharging,
Stockpiling etc.
